PROFESSIONAL PROFILE

Senior Product Designer with **8+ years of experience** designing **end-to-end B2B SaaS** digital products, from discovery to production, in regulated domains such as insurance and banking. For four years I **led design for a group with five products**. The core is a multi-tenant SaaS platform in 12 languages and with each client's brand, held together by a single design system. My strength is **product thinking**: I turn functional ambiguity into clear flows, useful dashboards and configuration that the business side can use without development. I also design the content that teaches people how to use the product: **help videos, tutorials and FAQs**. **I use AI every day** in my process (prototyping, research synthesis and building Foundations in Figma and front-end code with Claude), and I understand where LLMs help and where they fail. Computer Science background: I review the React implementation, and my portfolio is a Next.js project with tests and public code.

SKILLS

Product design and AI: End-to-end B2B SaaS design, multi-tenant and white-label products, complex workflows, information architecture, content management and help documentation, AI and LLMs applied to design.

Tools and Design Systems: Figma (advanced), scalable design systems, design tokens, FigJam, interactive prototyping, microcopy and UX writing, Adobe Photoshop and Illustrator.

Research and metrics: Dashboards and data visualisation, user research, product discovery, usability testing, Maze, Microsoft Clarity.

Technical knowledge: HTML5 / CSS3, React / Next.js, TypeScript, handoff to Engineering, WCAG 2.2 AA accessibility. Daily collaboration with teams working in React, React Native, Chakra UI, Tailwind CSS, Flutter, Symfony and Laravel.

AI in my process: interactive prototyping, exploring alternatives, research synthesis, documenting flows and front-end implementation directed with Claude.

KEY ACHIEVEMENTS

- I designed the product that today has **165 screens across 8 business areas**, with **12 languages and brand locales** and an interface shaped by **347 permissions**, held together by a single design system and with no separate version per client.
- I found the lack of consistency between modules, proposed a design system and built it from scratch. I started with an audit of the monorepo: **267 colour values reduced to 24 tokens**, each with a role, adopted by **all four front-end developers**.
- I moved client customisation **out of the code and into configuration**, with the product catalogue, decision rules and forms defined as data. Adding a new company no longer needs a branch of the product, and when you issue a policy the visible fields per step go down **from 60 to 14**.
- **I led the design of five products, adapting each one to its audience**: HERMES, the Linikit dashboard, Flesip, Ayax Suscripción and the Montsaint e-commerce site.
- I kept **weekly contact for 4 years** with the Product Owners of client companies, running discovery sessions and presenting **2-3 alternatives per initiative** so that each business rule fitted without breaking the product apart.
- I reorganised my process to spend less time on repeated solutions and more on **analysing real usage patterns with Microsoft Clarity**, moving from 1 proposal per initiative to **2-3 alternatives compared with the client**.

PROFESSIONAL EXPERIENCE

Senior Product Designer | Atrinium · Málaga, Spain

May 2022 – August 2026

B2B software group: HERMES, a multi-tenant, white-label SaaS platform for the insurance sector; Flesip (invoicing) and Montsaint (e-commerce)

- I led the design of the group's products as the only designer, from discovery to production. I defined the **information architecture and the critical flows** of HERMES: underwriting, policies, claims, receipts, commissions, CRM and reporting, tasks, authorisations, document management and data import.
- I designed **interactive dashboards and data visualisations** for the **Admin module** and the **Tenant module**: one view for the people who run the platform and another for each client company.
- I set up the **Figma component library** for multi-tenant products, reducing design debt.

· I proposed and built the **design system** from scratch: components, tokens, typography, colour and iconography, with usage rules, WCAG 2.2 AA and an audit of parity between Figma and code.

· I worked every day with Product and Development to define **microcopy, complex states and unambiguous flows** using agile methods, and I designed the **support system**: help videos, FAQs and product tutorials.

· **Flesip** (2024-2025): a complete invoicing product for freelancers and SMEs (app, website and a portal for accounting firms), including the redesign of Settings into four blocks with one shared grammar, quick invoices with QR codes and VeriFactu compliance.

· **Montsaint** (2023-2025): online store and lead-generation landing page for a network of more than 700 optician stores, with a UI kit, a brand sheet and an art direction guide for photography.

UI / Product Designer | Darien Technology · Panama (remote)

February 2021 – May 2022

Technology consultancy: digital banking for Mercantil Banco Panamá

· **I led the experience and interface design** for web and mobile apps in a regulated financial environment with **more than 100k active users**: digital payments, the Mony app, Tadelanto, mortgages, loans, credit cards and vehicle finance.

· I designed **executive dashboards** to track transaction metrics in real time and gathered the team's feedback with an 8-question survey.

· I solved **onboarding, activation, security and authentication** in a regulated mobile product, validating prototypes with Maze before moving to development.

· I validated every screen with **unmoderated tests and my own interviews**, and presented the proposals to the client.

· I iterated **high-fidelity interactive prototypes** in Figma, working closely with React front-end engineers to ensure a smooth handoff.

Earlier and freelance experience

March 2017 – December 2020

Taksio Technologies (UX/UI Designer, Caracas · 2017-2019) · Geekconic (Zulia · 2019) · International freelance (2019-2020) · RedBird Smart Tracker (Caracas · 2017)

· I built from scratch the design system and the operational flows of a **multimodal mobility platform**: passenger and driver apps and **operations dashboards**.

· I managed end-to-end client projects for fintech, banking and international logistics.

EDUCATION

5-year university degree in Computer Science · Universidad de Oriente, Cumaná, Venezuela · 2017

LANGUAGES

Spanish (native) · English B2, actively studying
