

Product Designer (UX/UI)

VÍCTOR MAZA

Málaga, Spain | vctrmz47@gmail.com | linkedin.com/in/victor-maza47 | behance.net/mazdesignr | victormaza.vercel.app/en

PROFESSIONAL PROFILE

Product Designer with **9 years of experience** turning complex business problems into solid information architecture and flows that people can actually work with: insurance ERP, digital banking, fintech and mobility. My speciality is **B2B products sold to many clients at the same time**: for four years I designed a multi-tenant SaaS platform able to support different business rules, currencies, languages and brands on a single product, without forking it per client. I build design systems with usage rules and decision criteria, not only component libraries. Hybrid profile: I have a degree in Computer Science and I work with HTML and CSS, so I can make ideas concrete and talk to developers as an equal. Four years presenting and defending proposals to the Product Owners of client companies.

SKILLS

- Multi-tenant products and **white-labeling**: theme, wording and language as per-client configuration
- Design of **configuration layers**: product catalogue, decision rules, schema-defined forms and multi-step wizards
- Information architecture and critical flows in dense, regulated domains
- Scalable design systems with governance, usage criteria and parity with code that can be audited
- Dense B2B products: tables as a workspace, long step-by-step processes and UI that changes with permissions
- **WCAG 2.2 AAA** accessibility as an entry requirement, not as a goal
- Client discovery and defending proposals to Product Owners
- Comparing real alternatives as a way to decide
- Research and validation with data from real use
- Design of onboarding, activation, security and authentication in a regulated environment
- Interactive prototyping and handoff followed through to production
- Generative AI applied to the design process

TOOLS AND TECHNOLOGY

Design and prototyping: Figma (advanced), FigJam, interactive prototypes, Adobe Photoshop, Adobe Illustrator.

Research and analytics: Microsoft Clarity, Maze, discovery sessions with clients and stakeholders.

Code and CMS: HTML, CSS, WordPress. Daily collaboration with React, React Native, Chakra UI, Tailwind CSS, Flutter, Symfony, Laravel, Android and iOS.

AI: interactive prototyping, exploring alternatives, summarising research and documenting flows.

KEY ACHIEVEMENTS

- I designed the product that today has **165 screens across 8 business areas**, with **12 languages and brand locales** and an interface shaped by **347 permissions**, held together by a single design system and with no separate version per client.
- I found the lack of consistency between modules, proposed building the design system and built it from scratch, **cutting the design delivery cycle from 5 to 2 days per initiative** (–60%).
- I moved client customisation **out of the code and into configuration** —product catalogue, decision rules and forms defined as data—, so adding a new company no longer needs a branch of the product.
- I helped bring the support load down **from several thousand tickets a day to single figures** by redesigning the critical flows and building the system that stopped the confusion coming back (a team result built up over four years, which also included a framework and a database migration).
- I kept **weekly contact for 4 years** with the Product Owners of client companies, running discovery sessions and presenting **three alternatives per initiative** so that each business rule fitted without breaking the product apart.
- I freed up **36% of my design time in 8 months** and put it into research —analysing real usage patterns with Microsoft Clarity—, moving from 1 proposal per initiative to 2-3 alternatives compared with the client.

PROFESSIONAL EXPERIENCE

Product Designer (Senior) — Atrinium · Málaga, Spain

May 2022 – August 2026

Multi-tenant B2B SaaS for the insurance sector — HERMES platform

- The only Product Designer on the team. I defined the information architecture and the critical flows of the product: underwriting, policies, claims, receipts, commissions, settlements, CRM and reporting, as well as tasks, authorisations, documents and data import.
- I designed the platform as a **white-label product**: the brand, the wording and the language of each company travel through semantic tokens and language catalogues, without duplicating components or forking the design.
- I designed the **configuration surfaces** that let the business side assemble insurance products, decision rules and questionnaires without custom development — the part that decides whether a multi-client SaaS scales or falls apart.
- I proposed and built the **design system** from scratch: components, tokens, type hierarchy, colour rules and iconography, documenting when to use each pattern and when not to, with WCAG 2.2 AAA accessibility and an audit of parity between Figma and code.
- I presented and defended every proposal to the Product Owners of client companies, with **1-2 hours of discovery** before designing each new process. I based the decisions on **real usage data** analysed with Microsoft Clarity and documented the flows as interactive prototypes, so that developers could build without guessing.

UI / Product Designer — Darien Technology · Panama

March 2021 – May 2022

Technology consultancy — digital banking project for Mercantil Banco Panamá

- I designed interfaces and flows for financial products for an external client: loans, mortgages, vehicle finance, credit cards and the Mony mobile app.
- I solved **onboarding, activation, security and authentication** in a regulated mobile product, validating prototypes with Maze before moving to development.
- I presented product proposals to the client and grew the mobile design system, unifying components across products.

Earlier and freelance experience

March 2017 – December 2020

Taksio Technologies (UX/UI Designer, Caracas · 2017-2019) · Geekconic (Zulia · 2019) · International freelance (2019-2020) · RedBird Smart Tracker (Caracas · 2017)

- I built from scratch the design system and the operational flows of a **multimodal mobility platform**: passenger and driver apps plus operations dashboards.
- I ran client projects from start to finish as a freelancer for fintech, banking and international logistics, and also did the information architecture and the web design system for a client in retail.

EDUCATION

Bachelor's degree in Computer Science — Universidad de Oriente, Cumaná, Venezuela · 2006-2017

LANGUAGES

Spanish (native) · English B1, actively studying towards B2
